## Summary

My research interests lie in computer vision, machine learning and medical imaging. Recent research include exploring physics-constrained, PDE-integrated algorithms for understanding real-world transport (especially fluid flow and mass diffusion) time-series. Applications include fluid flow simulation, lesion detection and localization.

## Research Experience

### Department of Computer Science, University of North Carolina at Chapel Hill

*Research assistant, Supervisor: Dr. Marc Niethammer*

Chapel Hill, U.S.

Feb 2019 – Present

- Proposed a general learning framework for constraint-free representation learning of physics fields from mass transport time series. **[CVPR'21 Oral]**
- Built a PyTorch advection-diffusion PDE solver toolkit (in 1/2/3D) with various boundary conditions, which can be used for both numerical solutions and data simulation.
- Created a 3D brain advection-diffusion simulator, which integrates (1) brain vessel segmentation, blood flow estimation; (2) diffusion tensor estimation; (3) advection-diffusion transport simulation.
- Proposed a data-assimilation approach (PIANO) which estimates the divergence-free velocity and isotropic diffusion fields of the contrast agent in perfusion imaging via variable-coefficient advection-diffusion PDEs. **[MICCAI'20 Oral, IEEE TMI (In revision)]**

### Biomedical Research Imaging Center, University of North Carolina at Chapel Hill

*Research assistant, Supervisors: Dr. Dinggang Shen and Dr. Pew-Thian Yap*
